

Deaf Champions League Football and Futsal

Method of calculating DCL coefficients

The DCL of a country for a season is equal to the sum of the points of its clubs by the number of clubs that have participated in a European competition during this season.

The DCL coefficient of a club for a season is equal to the sum of the points acquired during that season, to which is added 20% of the coefficient of its country.

The DCL coefficient used to determine the number of participants per country in the championships, as well as the heads of series in the draw, is the sum of the coefficients of the last five seasons.

The points acquired by the clubs are composed of:

- **Points per game**, a win = 4 points, a draw = 2 point.
During the qualification phases these points are divided by two, and are not counted in the calculation of the coefficient of the club. The points are distinguished in the qualification matches (**PQ**) and the points obtained in the competition (**PC**).
- **Qualifying Bonus Points (BonusQ)**: awarded according to the level that the club has reached in the qualification phase. These points are counted only in the calculation of the club coefficient.
- **The podium points (Pod)**: awarded according to the level reached in competition from the chickens of the Champions League. This podium is counted in the coefficient of the club as well as in the coefficient of the country.

The following formulas are thus obtained:

- Coef. Club = PC + BonusQ + Pod + (20% of the country coefficient)
- Coef. Country = (PQ + PC + Pod) / number of participating clubs

Table of points and bonuses

	Champions League	Match Points
Groups	4 pts	Win= 2 point Drawn= 1 point
¼	5 pts	Win= 4 points Drawn= 2 point
½	1 pt	Win= 4 points Drawn= 2 point
Final	1 pt	Win= 4 points Drawn= 2 point
